Data Flow Diagram

The DFD below describes the proposed PocketSmart AI flow using an external User, AI recommendation processes, external product/service sources, and data stores. The template defines external entities, processes, data stores and labeled data flows as the required DFD elements.

USER Budget, category, preferences, occasion	1. INPUT & VALIDATE Validate budget and planning preferences	USER PROFILE / REQUEST STORE Preferences & request data
	↓ validated request	↓ request data
EXTERNAL PRODUCT / SERVICE SOURCES Product/service data, prices, details	2. AI RECOMMENDATION & BUDGET OPTIMIZATION Generate personalized recommendations and allocate options within budget	RECOMMENDATION STORE Recommendation / shortlist data
↑ source data	↓ recommendations + budget analysis	↓ shortlist
	3. PRESENT & COMPARE Display recommendations, estimated spend and comparison	

Main data flows: User request → validation → AI/budget optimization → recommendations/shortlist → user comparison and selection. External sources provide product/service information used by the recommendation process.
