Solution Summary

Field	Details
Repository Link / URL	https://github.com/davidainosr950-lang/AI-ML-GEN-AI-PocketSmart-Project
Programming Language(s)	JavaScript / TypeScript for web client; Python recommended for AI/backend services.
Framework(s) Used	React for the web interface; FastAPI/Flask-style Python service for API and AI orchestration (final implementation should match the actual code).
Key Features Implemented	Project-defined features: budget and preference input, category selection, personalized recommendations, budget allocation/optimization, comparison and refinement.
Pending / Incomplete Features	Final production code integration, external product/service data integration, deployment, performance evidence and final end-to-end validation are pending unless already completed outside the supplied documents.
Setup / Run Instructions	1. Clone the repository. 2. Install frontend/backend dependencies. 3. Configure AI/external API keys using .env.example. 4. Start backend service. 5. Start frontend. 6. Open the local application and test each category.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes (design target)
2	Meaningful variable and function names are used	Yes (design target)
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Not verified from supplied files
6	Code is committed to a version control repository	Pending final source-code upload

Additional Notes / Comments: The supplied project materials define the solution and architecture, but do not include a final executable source-code package. Update the status fields after the final build is tested.
