

Project Executable Files

Date	15 March 2026
Team ID	XXXXXX
Project Name	PocketSmart AI
Maximum Marks	3 Marks

The template expects all executable/deployable files and setup instructions so an evaluator can run or deploy the solution. Since the final source package was not supplied here, items are marked Pending or NA rather than claiming submission.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	No – Pending
2	README / Setup Guide	Yes – project README prepared
3	requirements.txt / package.json / dependency file	No – Pending with final implementation
4	Database schema / seed files (if applicable)	NA / Pending depending on persistence design
5	Environment configuration file (.env.example or similar)	Pending
6	Deployed application URL (if hosted)	No – not provided
7	APK / Executable binary (if applicable)	NA – web application
8	Dockerfile / Containerization config (if applicable)	Pending / Optional
9	Test files and test results	Pending
10	Demo video or walkthrough (if required)	Pending

Step 2: File / Folder Structure

Folder / File	Purpose
frontend/	PocketSmart AI web interface and category-specific input/recommendation screens.
backend/	API routes, validation and application business logic.
ai/ or services/	Prompt construction, AI orchestration and recommendation processing.
integrations/	External product/service and AI API connectors.
data/	Optional schemas, seed data or local development data.
tests/	Unit/API/performance test scripts and test evidence.
.env.example	Names of required configuration variables without real secrets.
README.md	Setup, run, architecture and usage instructions.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided
Login Credentials (Demo)	Not applicable / to be created if authentication is implemented
Platform / Hosting Provider	To be selected for final deployment
Repository Link	https://github.com/davidainosr950-lang/AI-ML-GEN-AI-PocketSmart-Project
Demo Video Link	Not provided

Step 4: Run Instructions

1. Clone the repository. 2. Install frontend and backend dependencies. 3. Copy .env.example to .env and configure required AI/API credentials. 4. Start the backend service. 5. Start the frontend development server. 6. Open the displayed local URL. 7. Test Home Interior, Party Planning and Jewelry flows.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Final source package not supplied with the documentation	Upload final source code and dependency files before submission.
2	External recommendation data availability may vary	Use supported APIs/data sources and graceful fallback handling.
3	Performance results not yet evidenced	Execute load/performance tests and attach screenshots/results.
